SUMMARY

Junior software engineer with a production-deployed full-stack application, 94%+ test coverage, and hands-on DevOps experience from container build through automated deployment. Ready to contribute to a Rails codebase on day one, write tests, and take ownership of features end to end. Completing an AAS in Software Design at Walla Walla Community College (June 2026).

SKILLS

Backend: Ruby on Rails, Hotwire (Turbo / Stimulus), PostgreSQL, ActiveRecord, RESTful APIs, Service Objects, MVC, OOP

DevOps: Docker, GitHub Actions, Kamal 2, DigitalOcean, Linux, Git, PowerShell

Frontend: JavaScript, HTML5, CSS3, Stimulus.js, Rails Views (ERB)

Practices: TDD, Minitest, N+1 prevention, service-layer architecture

PROJECTS

Pangu Terminal · *Rails 8 · Hotwire · PostgreSQL · Docker · Kamal 2 · GitHub Actions*

panguterminal.ambalong.dev · github.com/jambalong/pangu-terminal

- Shipped a production Rails 8 application with all five proposal features, 94%+ service-layer test coverage, and CI via GitHub Actions running on every pull request.
- Kept game rules out of controllers by building a service layer that queries 10+ static cost tables; each feature is independently testable without touching the database or the web stack.
- Designed a stateless REST API across six versioned endpoints, authenticated with SHA-256 hashed bearer tokens and per-key rate limiting, so third-party clients need no session management.
- Used Turbo Streams to re-render the full synthesis family on inventory edits, delivering recalculated craftable counts to the browser without a page reload or a separate API call.
- Built the Waveplate Optimizer to rank farming sources by deficit coverage rather than raw drop rate, reducing the planning problem to a single sorted list a player can follow top to bottom.

EFI Secure Boot Compliance Script · *PowerShell · ManageEngine*

github.com/jambalong/efi-bootmgr-cert-check

- Deployed fleet-wide via ManageEngine to audit Windows 11 boot manager binaries against the UEFI CA 2023 certificate chain, writing results to a UNC path for centralized security review.
- Discovered that Get-AuthenticodeSignature and Get-PfxCertificate both return incorrect issuer data for EFI binaries, a documented PowerShell limitation, and switched to X509Certificate.CreateFromSignedFile as the correct extraction path after reproducing the failure in isolation.

EXPERIENCE

Information Technology Intern

Jan 2025 – Present

Walla Walla Community College

- Audited 600+ technology assets across 65+ classrooms and campus facilities, producing accurate departmental inventory records.
- Analyzed lab usage data against term calendars, college closures, and scheduled events to produce summary reports informing leadership resource planning.
- Reimaged 60+ computers annually, restoring devices to deployment standard and returning equipment to full academic service within the same term.
- Wiped 100+ decommissioned machines and removed drives to meet data security compliance requirements before equipment left campus.

EDUCATION

AAS in Software Design

Expected June 2026

Walla Walla Community College
